Development of portal FTN Monitor.

Used technologies: PHP5, Mysql, JS.

Projects

Edvantis and Edvantis Poland Projects

- **US and Australia-based eCommerce project**

The software solution is a direct competitor of eCommerce platform Magento (however not sharing the codebase), with the larger scale. The aim was to create a team of developers, QAs and other IT-related positions in order to deliver the updated to the project core, perform support of the existing system and update it to the newer set of technologies.
- **Berlin-based healthcare project**

The software solution creates a simple analysis "at the push of a button", while simultaneously supervising the data, and encoding feature and creating the best prerequisites for active management support.

For budget analysis and planning services, this software solution is designed to be compatible with the structures of the current compound remuneration system (e.g. MDC, DRG), the organized structure of hospitals, and the medical services. After importing the case data, they are then grouped into the desired ID GROUPER G-DRG versions and can be simultaneously checked for their validity through the appropriate application.

The goal was to add or update several software modules for this software solution, which was successfully delivered.
- **US-based oil and gas related customer**

The team which customer requested was aimed to create a big amount of proof-of-concept projects for their customers, integrated into their platform (oil and gas reports analysis), which was successfully performed
- **Cologne-based media-analyse project**

The recreation of an existing media monitoring system for gathering data within the new vision. The main goal of a project is to select, prioritize and analyze the news flow of over 200 million sources – all day, every day, around the world.
- **Denmark SW development company for automotive market**

The goal was to perform maintenance of legacy CRM, implement new features and fix issues with the system.

Lazard Export LP Infrastructure

Lazard Export LP Projects

- **LE Service**

Zend-based system, multilingual (with PO/MO translations). Consists of two catalogues (individuals and companies), messaging system, partnership system (something like bookmarking one another), user management system (with profiles) and set of service pages.
- **LE Shop**

Set of OpenCart-based systems, united to one platform.
- **LE Fund**

Crowdfunding system, consists of three main parts - CF banking, CF inventors and CF charity. Also encompasses an auction system for selling participations in projects.
- **GEO**

OpenStreetMaps server, acting as a proxy for inner database (local copy of OSM)
- **CDN**

Symfony SonataMediaBundle-based system, holding all media for projects

LigaBusinessInform projects

- **Liga.net**

Bitrix-based systems, used as a mass-media highload

website. Consists of several Bitrix projects, connected one with another via special API.

- 3Doma.ua
Originally Bitrix-based system, that consists of three bitrix projects, connected with one another on a file basis. The project was moved to Symfony platform shortly before closing.
- lbi.com
Bitrix-bases project, company landing website.

KP Media projects

- Bigmir.net
Participating in creation of a new inner PHP framework system.

Digital Ventures projects

- Tochka.net
Creating and developing the parts of Codeigniter-based with Zend parts project (Finance Passage, FUN etc.)

Insollo projects

- 2056.ru
A python-based backend project, fully custom, with a flash-based frontend, connected via HScript.

Softheme projects

- Horizon
Python-bases custom project, written using Django framework
- TellAllMyFriends
Symfony-based social network.

Threel projects

- Corporate controlling system
Custom system for controlling work of employees

MKP Topaz projects

- 1c 7.7 accounting configurations
- Corporate website

FTN Monitor projects

- FTN Monitor website

Education

Chernihiv State Technological University
